1. The following is an examiner's statement of reasons for allowance: The examiner could not find fair suggestion for the oscillator/clock generator with crystal with first and second amplifiers attached to the crystal inputs, the oscillator forced to oscillate at the third overtone, a tuning resistor with value such that the absolute value of the product($G_m \times X_{C1} \times X_{C2}$) is less than the impedance of the crystal...and multiplier with filter on the output of the oscillator output. The reference to nelson US 6,091,307, is typical of the balanced crystal oscillator circuit to improve noise reduction.

The following typo's have been corrected:

In claim 13, lines 6 and 14, " an lower" is now—a lower--.
